1. Product Summary Overview

- **Context:** The organization processes claims regarding medical treatment expenses and recovery support. To ensure due diligence, Eligibility Officers (EO) and Mobile Claims Managers (MCM) require a streamlined interface to review evidence requests (documents), validate their contents, and record determination rationale.
- **Objectives:**
 - Provide a context-aware "Evidence Received" interface for reviewing claim and case documentation.
 - Implement strict business controls regarding evidence verification status and auditability.
 - Facilitate the capture of structured rationale (Approval/Decline reasons) and enable export of this data for determination letters.
- **Assumptions:**
 - Documents are uploaded in a format compatible with a standard Salesforce document previewer (e.g., PDF).
 - Users accessing the module have the appropriate EO or MCM permission sets.

• **Out of Scope:**

- The process of scanning or ingesting the physical documents (system assumes documents are already "Received").
- Automated AI verification of document contents (manual review required).

2. User Personas

Persona	Permission Set Groups	Permission Set	Sharing Rules
Eligibility Officer (EO)	Claims Management	Evidence_RW	Read/Write access to Claim and Case Evidence. Authority to update Status to Verified/Rejected.
Mobile Claims Manager (MCM)	Claims Management	Evidence_R	Read-only access to Evidence lists and previews.

3. Requirements

3.1 Business Requirements

Process (L3)	Subprocess (L4)	User Story	Acceptance Criteria
2.4 Review & Verify evidence	2.4.1 Review evidence	User Story 2.4.1.1: As an EO or MCM, I want to view all received evidence on the correct Claim or Case record so that I can access relevant documents quickly.	An "Evidence Received" tab exists on both Claim and Case records. The Claim tab shows evidence raised on the claim and all related cases, while the Case tab shows only evidence specific to that case. Users can open any evidence item from the list to review the details and all associated documents directly from Salesforce. The evidence table displays Evidence Name, Request Type, Claim Number, Case Number, Status, Received Date & Time, and Number of Documents, and supports

			search/filtering across these fields.
2.4 Review & Verify evidence	2.4.1 Verify evidence	User Story 2.4.1.2: As an EO, I want to manage the lifecycle status of received evidence items so that their processing state remains accurate.	Every new evidence item defaults to the "Unverified" status, and the EO can manually change it to Partially Verified, Verified, Rejected, or No Longer Required. The Evidence Received grid supports multi-select so bulk status changes can be applied via the action drop-down. Verification requires an attached document (except for AWE Calculation requests). Once an item is Verified or Rejected it becomes read-only and the parent Evidence Request status automatically reflects the child item statuses.
2.4 Review & Verify evidence	2.4.1 Review evidence	User Story 2.4.1.3: As an EO, I want to review evidence details and documents within the record so that I can evaluate submissions without leaving the page.	Each evidence item provides a document previewer within the record so the EO can review submitted files without navigating away. If multiple documents are attached, the EO can use a drop-down list to choose which document to preview. Evidence Description, Received Date & Time, Status, Evidence Item Type, and the full document list are always

			displayed for every evidence item.
2.4 Review & Verify evidence	2.4.2 Collate evidence as supporting information	User Story 2.4.2.1: As an EO, I want to capture structured supporting information while reviewing evidence so that determination rationale is accessible later.	Each evidence item contains a Supporting Information section with three fields: Reason for Approval, Reason for Decline, and Other Comments. Users can copy text from the document previewer (for extractable formats such as PDF/Word) and paste it into the rationale fields, subject to technical constraints. Every rationale field enforces a 32,768-character limit and the system displays an error message if the limit is exceeded.
2.4 Review & Verify evidence	2.4.2 Collate evidence as supporting information	User Story 2.4.2.2: As an EO, I want a consolidated summary of recorded rationale so that I can prepare for determination efficiently.	The Claim record provides a Supporting Information tab that lists Evidence Name, Approval Reason, Decline Reason, and Other Notes for every related evidence item. Users can copy text directly from the summary table to prepare the final determination narrative. A "Redirect To Report" button opens the rationale in report form so it can be copied or exported to Excel.

3.2 Business Flow

Business flow diagram unavailable.

Narrative:

- Business flow diagram will be generated automatically based on the product summary inputs.

3.3 Data Requirements

3.3.1 Data Model

Placeholder – Maintained manually. Do not populate via automation.

3.3.2 Data Migration

Entity	Attribute	Requirement	Notes
N/A	N/A	N/A	No data migration requirements specified in input materials.

3.4 Validation

Scenario	Validation Rule	Outcome	Notes
Status Update to Verified	IF(Status = 'Verified' OR 'Partially Verified') AND (Doc_Count = 0) AND (Type != 'AWE Calculation')	Prevent Save. Error: "Cannot verify evidence without an attached document."	Exception applies only to 'AWE Calculation' type.
Status Locking	PRIORVALUE(Status) = 'Verified' OR 'Rejected'	Prevent Save. Error: "Status is Final and cannot be changed."	Once Verified or Rejected, the record is locked from further edits.
Rationale Field Length	LEN(Field) > 32768	System Error / Truncation.	Fields: Reason for Approval, Reason for Decline, Other Comments.

3.5 Integration

Interface	Direction	Trigger	Payload / Details	Notes
N/A	N/A	N/A	N/A	Functionality relies on internal Salesforce data and document storage.

3.6 Reporting

Report / Dashboard	Audience	Purpose	KPI / Metric	Notes
Determination Support Report	EO	Export verified rationale to Excel for inclusion in determination packs.	N/A	Triggered via "Redirect To Report" button. Must allow Excel export.

4. Key Design Decisions

Date	Decision	Detail	Source
27/01/2026	Context-Aware Filtering	The 'Evidence Received' list must dynamically query data based on the parent record (Claim vs. Case). Claim view shows tree (Claim + Children), Case view shows Case only.	Transcript (PO/BA/Dev)
27/01/2026	Verification w/o Document	Business Rule: Strict prohibition on verifying items without docs, with the sole exception of 'AWE Calculation'.	Transcript (BA)
27/01/2026	Status Finality	To prevent tampering, 'Verified' and 'Rejected' statuses act as a hard lock on the record.	Transcript (BA)

5. Functionality

5.1 User Journey

Step	Actor	Description	System Behaviour
1	EO	Navigates to 'Evidence Received' tab on a Claim.	Displays list of all evidence requests for the Claim and all associated Cases.
2	EO	Filters list to view 'Unverified' items.	Filters the grid view.
3	EO	Clicks on a specific Evidence Item.	Opens Detail View with Document Previewer pane.

4	EO	Reviews document and copies relevant text.	Copies text from preview pane; Pastes into 'Reason for Approval' text box.
5	EO	Updates Status to 'Verified'.	System checks for attached document. If present, saves record. Locks status.
6	EO	Navigates to 'Supporting Information' tab on Claim.	Views summary table of all captured rationale. Clicks 'Redirect to Report' to export to Excel.

5.2 UI / Screen Behaviour

Screen	Component	Description	Acceptance Criteria	Notes
Evidence Received Tab	Data Grid	List of evidence requests.	Searchable (Description, Type, Case#, Status, Date). Filterable by Status. Multi-select checkboxes for Bulk Actions.	Context-aware (Claim vs Case).
Evidence Detail View	Document Previewer	Pane to view attached files.	Must support switching between multiple files via dropdown/nav.	
Evidence Detail View	Rationale Fields	Long Text Areas for capturing decision logic.	3 distinct fields (Approval, Decline, Other). Max 32,768 chars each.	
Claim Level	Supporting Information Tab	Summary table of rationale.	Columns: Evidence Name, Approval Reason, Decline Reason, Other Notes.	

6. Test Cases

Test Case	Scenario	Steps	Expected Result
TC-001 - Evidence visibility scoped by record type	EO/MCM views the Evidence Received tab on Claim and Case records.	1. Navigate to a Claim record that has at least one related Case and multiple	Claim tab shows evidence raised on the claim and all related cases; Case tab

		Evidence Items. 2. Observe the Evidence Received tab on the Claim record. 3. Open a related Case record and observe the Evidence Received tab.	shows only evidence for that specific case.
TC-002 - Evidence status lifecycle and bulk update	EO updates individual and multiple evidence items while enforcing lifecycle rules.	1. Select a single Evidence Item with status Unverified and change it to Partially Verified. 2. Select multiple items via the grid checkboxes and apply a bulk status update. 3. Attempt to change status to Verified without an attached document.	Status changes apply according to the lifecycle rules and validation prevents verifying items without documents.
TC-003 - Document review and supporting information capture	EO reviews documents and captures rationale on the Supporting Information fields.	1. Open an Evidence Item and preview each attached document using the selector. 2. Enter text in Reason for Approval, Reason for Decline, and Other Comments fields. 3. Paste a long text block exceeding 32,768 characters into any rationale field.	Documents render inside Salesforce, rationale fields accept user input, and the system displays an error when the character limit is exceeded.
TC-004 - Supporting Information summary and export	EO reviews the consolidated rationale on the Claim record.	1. Open a Claim record and navigate to the Supporting Information tab. 2. Verify that the summary table displays the rationale captured for each related Evidence Item. 3. Click the Redirect To Report button and export the report to Excel.	The summary table surfaces all rationale fields, allows copy/paste, and the report view can be exported to Excel.

7. Solution Design
